

Zerror Studios

SEO & AI Search Implementation Spec + Full Website Copy

Prepared July 2026 · For internal use and developer handoff

Part 1 is a ticket-ready implementation spec for the developer: exact current-to-new changes for every page's metadata, canonicals, robots.txt, sitemap, llms.txt, structured data, and on-page structure for AI citation, plus a measurement plan.

Part 2 is the full website copy, written to match the live site's section containers (headline lengths, paragraph word counts) in the business deck's voice, with the technology vocabulary kept at the SEO layer (meta, schema, FAQ) rather than in the visible headlines.

Before publishing: the case-study figures (350% YoY, 200% traffic, 500+ editors, 3M+ readers) require each client's sign-off before their names attach to them publicly.

PART 1 — SEO & AI SEARCH: EXACT CHANGES

1.1 Global head fixes (one-time, in the root layout)

1. **Title template.** The homepage title currently renders doubled ("...Creative Web Studio | Zerror Studios | Animated Websites...") because the layout default and the page title are stacking. Set the template to %s | Zerror Studios in app/layout.tsx and give each route only its own part. No page should ever inherit the fallback.
2. **Canonical logic.** Every page currently outputs canonical: <https://www.zerrorstudios.com>. Replace the hardcoded value with a per-route canonical equal to that page's own URL. This one line is currently telling Google to de-index the entire expertise section.
3. **Delete the meta-keywords tag** and the duplicated meta-author / meta-publisher strings ("Zerror Studios | Animated Websites, eCommerce & Custom CMS" is repeated across four meta fields). Google ignores keywords; the repetition reads as machine-generated.
4. **OG images.** Expertise pages point og:image at favicon/favicon.ico. Ship one 1200×630 og:image per route. The homepage already has a proper og.png — replicate that pattern.
5. **og:url per route.** Every page currently declares og:url = homepage. It must match the page's own URL, same as the canonical.

1.2 Page-by-page: current → new (title, description, canonical)

Homepage /

Current title: "Zerror Studios | GSAP & Next.js Creative Web Studio | Zerror Studios | Animated Websites, eCommerce & Custom CMS" (doubled)

New title: Zerror Studios — Where Design and Technology Move as One

New description: Zerror is a Mumbai design-led studio building custom websites, software and eCommerce for brands that refuse to look average. Zero errors between the idea and the internet.

Canonical: <https://www.zerrorstudios.com/>

/expertise/website-development

Current title: "Zerror Studios | Animated Websites, eCommerce & Custom CMS" (shared with three other pages)

New title: Custom Website Design & Development — Zerror Studios

New description: Websites designed to be felt and engineered to last. Custom-built, motion-led and fast — for brands that want people to stop, stay and remember.

Canonical: <https://www.zerrorstudios.com/expertise/website-development>

/expertise/e-commerce

New title: eCommerce Development & the Zcom Platform — Zerror Studios

New description: Commerce built to sell and scale. Shopify when it fits — Zcom, our own platform, when your business has outgrown templates.

Canonical: <https://www.zerrorstudios.com/expertise/e-commerce>

/expertise/custom-cms-development (rename route to /expertise/custom-software-development; 301 the old URL)

New title: Custom Software & CMS Development — Zerror Studios

New description: Dashboards, content systems and workflows built around how your team works. Software shaped to the business — never the other way around.

Canonical: self (new URL)

/expertise/branding-marketing-and-seo

New title: Branding, Marketing & SEO — Zerror Studios

New description: Identity, content and search — including AI search — built as one system, so being found and being remembered work together.

Canonical: self

/about

New title: About Zerror Studios — Named After a Standard

New description: Zerror means zero error. A Mumbai studio where designers and developers build side by side, so nothing gets lost between idea and launch.

Canonical: self

/work

New title: Selected Work — Zerror Studios

New description: Cases with teeth. Real clients, real stakes, real results — from global magazine launches to a commerce platform built from scratch.

Canonical: self

/contact

New title: Start a Project — Zerror Studios

New description: Tell us what you're building. Zerror Studios, Mumbai. We reply the way we build: fast, and with intent.

Canonical: self

Case study pages /work/[slug]

Title pattern: **{Client} Case Study — Zerror Studios**. Description written per project: one line of stakes + one of outcome. /work/deveshe-dreams currently renders "This Page is under development" — either publish it or set noindex until it is live; an indexed placeholder damages trust signals.

1.3 Routing and index hygiene

1. Footer links to /services; nav uses /expertise. Kill /services, 301 → /expertise.
2. /studio is in Google's index but returns 404. 301 → /about.
3. /expertise/custom-cms-development → 301 → /expertise/custom-software-development after the rename.
4. After deploy: Search Console → URL Inspection → Request indexing for the homepage + four expertise pages. Confirmation the canonical fix worked = all five appear as separately indexed URLs within 2–4 weeks.

1.4 robots.txt (ship exactly this)

```

User-agent: OAI-SearchBot
Allow: /
User-agent: ChatGPT-User
Allow: /
User-agent: GPTBot
Allow: /
User-agent: PerplexityBot
Allow: /
User-agent: ClaudeBot
Allow: /
User-agent: Claude-SearchBot
Allow: /
User-agent: Claude-User
Allow: /
User-agent: Google-Extended
Allow: /

```

```

User-agent: *
Allow: /
Disallow: /api/

```

```
Sitemap: https://www.zerrorstudios.com/sitemap.xml
```

Then verify the WAF/CDN is not overriding it: `curl -A "GPTBot"`

`https://www.zerrorstudios.com/ -I` must return 200. Vercel and Cloudflare both have AI-bot blocking toggles that silently override robots.txt — check the dashboard.

1.5 sitemap.xml + Bing

Generate `app/sitemap.ts` covering every live route with `lastModified`. Submit to Google Search Console **and Bing Webmaster Tools** — ChatGPT's live browsing leans on Bing's index, so Bing is your ChatGPT visibility. Enable IndexNow in Bing WMT for instant recrawl on updates.

1.6 llms.txt (ship at //llms.txt)

```
# Zerror Studios
```

```
> Zerror Studios is a Mumbai-based design-led studio building custom
> websites (GSAP, Three.js, Next.js), custom software and CMS systems,
> and custom eCommerce - including Zcom, its proprietary commerce
> platform. Design and development happen in one team.
```

```
## Services
```

- [Website Design & Development](https://www.zerrorstudios.com/expertise/website-development): Custom, motion-led websites built with GSAP, Three.js and Next.js.
- [Custom Software Development](https://www.zerrorstudios.com/expertise/custom-software-development): Headless CMS, dashboards and workflows on the MERN stack.
- [eCommerce Solutions](https://www.zerrorstudios.com/expertise/e-commerce): Shopify builds and Zcom, Zerror's fully customisable commerce platform for pre-orders, drops and live inventory.
- [Branding, Marketing & SEO](https://www.zerrorstudios.com/expertise/branding-marketing-and-seo): Identity, content, SEO and AI search optimisation.

```
## Work
```

- [RPSG Media](https://www.zerrorstudios.com/work/rpsg-media): Custom publishing ecosystem for The Hollywood Reporter, Esquire and Robb Report India.
- [Manifest](https://www.zerrorstudios.com/work/manifest): WordPress-to-custom migration with zero data loss.
- [Salman Khan Films](https://www.zerrorstudios.com/work/salman-khan-films): Timeless cinematic showcase website.
- [Deveshe Dreams](https://www.zerrorstudios.com/work/deveshe-dreams): Custom eCommerce platform on Zcom.

```
## Contact
```

- hello@zerrorstudios.com - Mumbai, India

1.7 Structured data (currently zero on the site — add all of this)

Sitewide, in the root layout: one JSON-LD @graph containing:

```
{
  "@context": "https://schema.org",
  "@graph": [
    {
      "@type": "Organization",
      "@id": "https://www.zerrorstudios.com/#org",
      "name": "Zerror Studios",
      "url": "https://www.zerrorstudios.com",
      "logo": "https://www.zerrorstudios.com/logo_white.svg",
      "email": "hello@zerrorstudios.com",
      "sameAs": [
        "https://www.instagram.com/wearezerorians",
        "https://www.linkedin.com/company/official-zerror-studios"
      ],
      "address": {
        "@type": "PostalAddress",
        "addressLocality": "Mumbai",
        "addressCountry": "IN"
      }
    },
    {
      "@type": "WebSite",
      "url": "https://www.zerrorstudios.com",
      "publisher": { "@id": "https://www.zerrorstudios.com/#org" }
    }
  ]
}
```

Per expertise page: a Service node with provider → #org and specific serviceType strings — this is what AI engines match to queries. E-commerce page: ["eCommerce development", "custom eCommerce platform development", "Shopify development"]. Website page: ["custom website development", "GSAP website development", "Three.js development"]. Software page: ["custom software development", "headless CMS development", "admin dashboard development"]. Branding page: ["brand identity design", "SEO services", "AI search optimisation"]. The tech vocabulary lives here and in the FAQ — not in the visible headlines.

Per expertise page: FAQPage schema mirroring the visible FAQ word-for-word (schema for invisible content is a policy violation).

Per case study: CreativeWork with name, about (the client), and creator → #org.

Validate every route in Google's Rich Results Test before merging.

1.8 On-page structure for AI citation (exact edits)

1. **One H1 per page.** The homepage H1 is the mission line — fine. Expertise H1s stay short (Part 2), but each page adds 2–3 question-phrased H2s, because these are what AI answers quote. Exact ones: e-commerce → "Shopify or a custom platform?" and "What is Zcom?"; website → "What makes a website worth staying on?"; software → "When should you go custom?"; branding → "How do you show up in AI search?"
2. **Answer-first paragraphs.** The first two sentences under every H2 must contain the complete answer; elaboration follows. AI engines lift openings, not middles.
3. **Fix the duplicated paragraphs in the DOM.** Each homepage section renders its paragraph twice (once with a "....." prefix — an animation artifact). The duplicate should be aria-hidden or

removed from the crawlable DOM; duplicated body text reads as low-quality markup.

4. **Entity consistency.** The e-commerce page currently uses Zcom, ZCommerce and Zcommerce. Find-and-replace to **Zcom** everywhere, including image alts and schema.
5. **Remove the five fabricated testimonials** (Elle Morgan / Northline Studio etc.) and the invented stat chips (+39% add-to-cart, score 96). Replace only with client-approved real numbers; until then, ship the section empty. Fake metrics are the fastest way to fail both a human's and an AI's credibility check.
6. **Alt text convention:** {Client name} — {what the image shows}, e.g. "Deveshe Dreams — collection drop page on Zcom." Client names in alts are how work pages rank for "{client} website."
7. **Internal links:** every case study links to its matching expertise page in body copy and vice versa (Deveshe ↔ e-commerce, RPSG ↔ custom software, Manifest ↔ branding/SEO, SKF ↔ website development). Breadcrumbs with BreadcrumbList schema on expertise + work routes.
8. **CTA microcopy bug:** "Step on the Zerror Studios and request a project with a few clicks" is broken English on every page — replacement copy in Part 2.

1.9 Measurement (so you know it worked)

Week 0: deploy 1.1–1.7, request indexing.

Week 2–4: four expertise pages indexed as separate URLs; FAQ rich results appearing in Search Console enhancements.

Week 4–8: track "custom ecommerce development Mumbai" and "GSAP website studio India" in GSC; test monthly in ChatGPT/Perplexity with "best custom website studios in Mumbai" and log whether Zerror gets cited. Monitor Core Web Vitals field data (CrUX) in GSC — LCP ≤ 2.5s, INP ≤ 200ms, CLS ≤ 0.1.

PART 2 — WEBSITE COPY

Matched to the live site's section containers (headline lengths, paragraph word counts). Register: the business deck — declarative, composed, a little sly. Wit through precision, not jokes. Technology vocabulary sits in meta tags, schema and FAQs only.

HOMEPAGE

ABOUT SECTION — ~45-word paragraph + four value words

Zerror is a design-led studio operating where design, technology and scalability meet. Great ideas often get lost between the two disciplines — few teams can do both, fewer still do it fast. We built Zerror to erase that gap, so ideas don't just survive. They shine.

Value words: Systems. Structure. Precision. Intent.

SELECTED WORKS — kicker (two lines) + ~38-word paragraph

Thoughtful design.

Technology that holds.

Work where design and technology move as one. No handoffs, no compromises, nothing lost in translation — every project built with structure, precision, and the patience to sweat details most people never notice. Built to perform. Built to last.

MISSION H1 — keep, it is the best line on the site

To build zero-error digital products, where design and technology move as one.

Website Design & Development · Custom Software Development · eCommerce Solutions · Branding, Marketing & SEO

CLIENTS SECTION — kicker + ~40-word paragraph

The company
we keep.

From global publishing houses to founders on their first launch, we work with teams that value clarity, structure and scale. The Hollywood Reporter. Esquire. Robb Report. Salman Khan Films. TATA Motors. Flipkart. Different businesses. One standard: zero.

Developer note: add THR India, Esquire India, Robb Report India, Manifest and Salman Khan Films logos to the wall — the strongest names are currently missing.

CTA BLOCK — replaces "Ready to launch Something Remarkable / Step on the Zerror Studios..."

Ready to build something
with zero errors?

Your next version starts here. Tell us what you're making.

FOOTER FRAGMENTS

Design. Development. Marketing. · Crafted with intent. · Nothing lost in translation. · Built to last.

EXPERTISE / E-COMMERCE

KICKER

[Commerce that earns the cart]

H1 (6 words) + tag words

Commerce built to sell. And scale.

Storefront UX · Checkout · Zcom

LEAD (~17 words)

A store should make buying feel effortless — natural, fast, and true to the brand people came for.

SUPPORT (~15 words)

We build commerce that balances storytelling, discovery, and a checkout that never fumbles the sale.

PARAGRAPH (~24 words)

From product cards to cart behaviour, every detail is shaped around shopper confidence — fewer drop-offs, smoother paths to purchase, and buyers who return.

STAT CHIPS — remove invented ones; run real ones once Deveshe approves

Revenue growth, YoY +350% · Traffic growth +165% · Average order value ↑ · Repeat purchases ↑

SECTION H2 (question-phrased, for AI citation) + ~28-word paragraph

Shopify or a custom platform?

We're not platform loyalists. Shopify is right for most stores, and we build it well. But some businesses don't fit a template — and forcing them never ends well.

Fashion · Jewellery · Health · Food · Lifestyle

ZCOM SECTION — H2 + kicker + ~18-word paragraph

Meet Zcom.

Total control,
zero restrictions.

Our own commerce platform. Not a theme, not a template — a system that bends to your business.

FEATURE CARDS — title + one line each

Made for your model — Pre-orders, drops, made-to-order: workflows templates refuse, built in from day one.

Live inventory — Stock tied to real production, updated in real time, visible at a glance.

Analytics that answer — Sales, conversion and customer behaviour in reports built around your questions.

Built-in loyalty & referrals — Repeat business by design, without a plugin bill attached.

Campaigns from the dashboard — Email, SMS and WhatsApp, sent from where you already work.

Search-ready structure — Clean architecture that search engines, and AI engines, can actually read.

Yours, fully — Complete IP ownership on full payment. Your store, your system, your asset.

COMPARISON TABLE INTRO

Ready-made platforms are built for everyone. Zcom is built for you.

PROOF BLOCK — replaces the fabricated testimonials

Deveshe Dreams sells limited handcrafted collections through pre-orders and drops — a model no template could hold. We built their store on Zcom. Revenue grew 350% year on year. The business was never the problem. The platform was.

FAQ — visible, matching FAQPage schema

Shopify or Zcom — how do we choose? Shopify for standard catalogues and quick launches. Zcom when you need pre-orders, drops, production-linked inventory, or design freedom a theme can't give.

What is Zcom? Zerror's proprietary eCommerce platform — fully customisable, fully yours on completion. Built for brands that have outgrown templates.

Can you migrate our store without losing rankings? Yes. Every URL, every redirect, every ranking accounted for. Manifest moved platforms with us and lost nothing.

Do you work on checkout and conversion? Constantly. It's where stores quietly lose money — so it's where we quietly earn ours.

EXPERTISE / WEBSITE DESIGN & DEVELOPMENT

KICKER

[Websites worth stopping for]

H1

Designed to be felt. Built to last.

LEAD (~17 words)

You get about three seconds before someone decides you're worth their time. We make them count.

SUPPORT (~15 words)

Motion with meaning, detail that rewards attention, and speed that never asks anyone to wait.

PARAGRAPH (~25 words)

Every site is custom — designed and built by one team, so what you approve is exactly what ships. No templates. Nothing lost in translation.

QUESTION H2 + answer paragraph (~30 words)

What makes a website worth staying on?

Restraint. Motion that guides instead of decorates, pages that load before anyone notices, and a design that still feels right three years from now. Trends age. Systems don't.

PROOF BLOCK

Salman Khan Films needed a site as timeless as the work. We built it years ago. It still doesn't look it.

FAQ

What kind of websites does Zerror build? Fully custom, motion-led websites — built with GSAP, Three.js and Next.js — for brands, products and stories that deserve better than a theme.

Do animated websites hurt SEO? Only badly built ones. Ours keep every word readable to Google and AI search from the first millisecond.

How long does a build take? Most run six to ten weeks. You see a working direction early, not at the end.

Who owns the website? You do, fully, on completion.

EXPERTISE / CUSTOM SOFTWARE DEVELOPMENT

KICKER

[Software shaped to the business]

H1

Built around how you work.

LEAD

Off-the-shelf tools are fine — right up until your business stops being off-the-shelf.

SUPPORT

We build content systems, dashboards and workflows that fit your operation exactly.

PARAGRAPH

When teams start working around their software instead of with it, growth has outrun the tools. We build the version that keeps up — and keeps scaling.

QUESTION H2 + answer (~30 words)

When should you go custom?

When the workaround becomes the workflow. Custom systems remove the ceiling: no template limits, no plugin roulette, and every process shaped to how your team actually ships.

PROOF BLOCK

When RPSG Media brought The Hollywood Reporter, Esquire and Robb Report to India, three very different newsrooms needed one system. Today 500+ editors publish on it daily. Three titles. One backend. Zero collisions.

FAQ

What is a headless CMS? A content system where writing lives in one place and publishes anywhere — your site, your app, whatever comes next.

Why custom over WordPress? No template ceilings, fewer vulnerabilities, and workflows that match your team exactly.

What's the stack? MERN — MongoDB, Express, React and Next.js, Node — API-first and built to scale.

Who owns the code? You do, on full payment.

EXPERTISE / BRANDING, MARKETING & SEO

KICKER

[Found first. Remembered longer.]

H1

Be found. Be remembered.

LEAD

A brilliant website nobody finds is a well-kept secret. We make sure yours isn't.

SUPPORT

Identity, content and search built as one system — each making the others work harder.

PARAGRAPH

A strong brand makes every message easier to trust, easier to find, easier to recall. We shape all three together, because separately they underperform.

QUESTION H2 + answer (~35 words)

How do you show up in AI search?

Your next client may ask a chatbot before they ask a friend. We structure your brand, content and site so that when someone asks for the best studio for the job, the answer includes you.

PROOF BLOCK

Manifest carried five years of search authority into a full platform migration. One broken link could have cost them years. Nothing broke. Nothing dropped. Traffic rose 200% after launch.

FAQ

Do you do AI search optimisation? Yes — alongside classic SEO, we make your site readable and citable by ChatGPT, Perplexity and Google's AI answers.

Can you handle brand and website together? That's the point of us. One team, one system, nothing lost between them.

Do you run campaigns? Yes — strategy, media and the conversion work that makes the spend worth it.

Do you work on brands you didn't build? Yes. Fair warning: we'll have notes.

ABOUT

OPENING LINE

The name is the standard.

PARAGRAPH ONE (~45 words)

Zerror. Zero error. Naming a studio after perfection is a risk — it means every launch has to keep the promise. Good. That's the point. When your name is a standard, you hold it, or everyone knows you didn't.

PARAGRAPH TWO (~45 words)

Great ideas usually break in the space between design and development — the handoff, where fonts shift, spacing slips and intent gets diluted. We removed the handoff. Designers and developers, one room, one system. What gets imagined is what gets shipped.

WHO WE'RE FOR

For founders who dream in beta. For brands that refuse to look average.

CLOSING

Your next version starts here.

WORK

INTRO (under "Cases With Teeth")

Real clients. Real stakes. Real numbers.

CARD LINES — one each

RPSG Media — Three global magazines. One system. Zero drama.

Manifest — Changed platforms. Lost nothing. Gained 200%.

Salman Khan Films — Built years ago. Still doesn't look it.

Deveshe Dreams — The store no template could hold.

CONTACT

Tell us what you're making.

We reply the way we build — fast, and with intent.

Form intent options: Start a project · Say hello · Join the team

Confirmation: **Message received. Zero errors.** We'll be in touch soon.

BEFORE THIS GOES LIVE

1. The case-study numbers (350%, 200%, 500+ editors, 3M+ readers) need each client's sign-off before their names attach to them publicly. A number you can't defend is worse than none.
2. "Shopify or a custom platform?" is deliberately an H2, not the H1, on the e-commerce page — that exact question is what founders type into ChatGPT, making it the single best AI-search entry point on the site. The answer-first paragraph sits directly under it.
